

I support satellite radio and I am a satellite radio subscriber. Instead of trying to limit competition, local radio should improve their services. Satellite radio provides a valuable service to those of us that live beyond major metropolitan areas. The quality of satellite radio is far superior to any that local radio has provided so far. If local radio wanted to help their listeners, they could improve their programming and quality. Local radio should be spending the money to improve as I have outlined above instead of wasting money on this type of regulation. I oppose bill HR 4026 and urge everyone to do the same !
